MY PERPETUAL PLANNER · APP

How to open *your app*

Today · Calendar · Reminders & birthdays · Habits · Money · Notes

Your app lives at this link. It opens in your web browser — no app store, no sign-up.

myperpetualplanner-app.pages.dev

On iPhone

1. Open the link in Safari.
2. Tap the Share button, then “Add to Home Screen” (you may need to scroll down).
3. Open the app from its new icon on your Home Screen.

On Android

1. Open the link in Chrome.
2. Tap the three-dot menu, then “Add to Home screen” (on some phones, “Install app”).
3. Open the app from its new icon on your Home screen.

On a computer

1. Open the link in Chrome or Edge and bookmark it.

Get reminder alerts

Next to each reminder and birthday, tap “Add to my phone’s calendar.”
Your phone’s own calendar will alert you, even when the app is closed.
The app itself can’t send alerts.

Your data is saved on your phone, in the app. Always open it from the same icon so everything stays in one place. To move it to another phone or computer, tap the ··· button at the top right, then “Save a backup file.” On the new device, use “Restore from a backup file.”
Clearing your browser data deletes what’s in the app, so save a backup now and then.
